

IT Moves, Changes and Storage

Whether you are moving one PC or a complex network of a thousand, business continuity is crucial.

It is essential that you have a carefully considered relocation schedule in place which allows for each individual item to be decommissioned, relocated and recommissioned on time.

Ede's provide a pre-move audit where we will consider the network and application configuration of every PC, along with its related operating systems and software. Our team of IT experts will ensure your network is replicated precisely upon recommission, and we always aim to achieve this with zero downtime.

We will recommission every desktop as agreed, in accordance with the relocation map for your new location, and within agreed timescales. You will also receive a full and comprehensive audit trail record for each user.

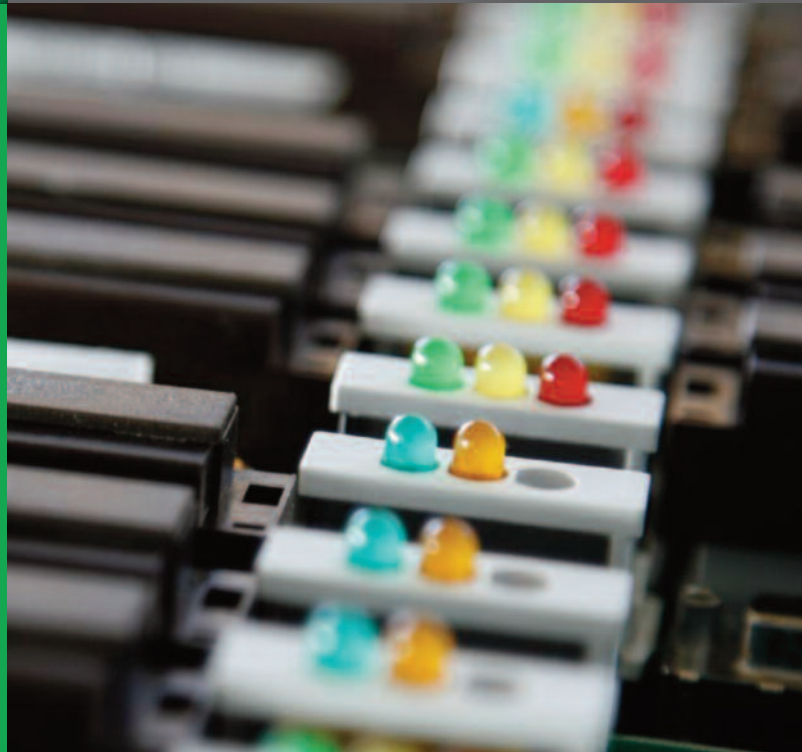

IT Moves and Changes

Ede's offer one of the UK's most comprehensive computer relocation and installation services.

EDIT is the Information Technology division of EDE's, providing full IT relocation services for our clients, including a comprehensive computer de-commissioning and re-commissioning service.

The service includes the relocation of Servers, Workstations, Monitors, and all associated items.

De-commissioning begins the process with our EDIT Engineers creating a full audit trail to make sure all configurations are retained, and our experienced professionals will then prepare and protect your kit so that all equipment and peripherals are packaged together.

Transportation of IT

Transportation of IT is always made in our air-ride lorries to guarantee that everything arrives safely.

Once the equipment has been relocated to its new location, it will then be distributed to the correct workstation, where it will be unwrapped and re-commissioned by the EDIT team with testing undertaken to ensure connectivity to your new location network.

Our dedicated security-approved project managers will liaise closely throughout each project with your IT and facilities representatives, making certain that nothing is overlooked at the planning stage and that all your business-critical schedules are understood and achieved.

IT Storage

Ede's can accommodate the storage of your IT Hardware such as PC Units, Server Units, Screens, Keyboards, Mice etc.

Many of our clients require rollout of new desktop equipment or the provision of disaster recover equipment and our storage expertise can be utilised to direct stock directly from your suppliers into our secure facilities.

We store, audit and asset track all items so that they are always ready for immediate deployment and benchtop workstations can be provided to aid in the imaging and processing of new kit.

Whatever your requirements, we can tailor our storage offering to provide you a secure, accessible and immediately accessible storage solution fully compiling with ISO27001 requirements.

IT Audits

Understanding exactly which IT Assets you own, where they are and who is using them is an important consideration for your business.

Our IT Audit and Asset Management service will provide you full transparency of the volume, make, model, location, and placement of every one of your IT assets within your estate and allow you to track each asset throughout its lifecycle.

In many instances IT audit surveys are undertaken in conjunction with business relocations to establish which items are allocated to departments, teams, or individual team members. Recycling Services

Ede's IT audit and asset management tracking service offers a flexible, straightforward, adaptive, and effective solution to meet your needs, whether you are moving your business to a new location, undertaking internal moves and changes, or simply want to better understand your IT asset inventory.
